

# Introduction To Javascript, and Variables, Data Type

## Problem 1:

Print "Ducat An IT Institute" in the console followed by "A Transformation in Education" in the next line.

## Problem 2:

- Define a variable called `name` with your Name as the assigned value
- Print the value stored in the variable name
- Change the variable to store your father's name
- Print the value stored in the variable name
- Change the variable again to store your mother's name.
- Print the value stored in the variable name

## Problem 3:

- Create a variable `name` to store your name
- Create a variable `age` to store your age

- Print the values stored in the variable on one line followed by the type of the variable in the next line

## Problem 4:

- Store the name, school, grade, section, rollno and the marks scored by the student in 3 subjects
- Print the report card of the student (You can make it look nice by using some keyboard symbols)
- Explore ASCII ART ([https://en.wikipedia.org/wiki/ASCII\\_art](https://en.wikipedia.org/wiki/ASCII_art)) or Text Art (<https://fsymbols.com/text-art/>) for some inspiration
